

Prompts

Wednesday, July 29, 2026 7:55 PM

What is Prompt?

A prompt is the text instruction we give to an AI model. In simple words, a prompt is the question or the task we type in.

Zero-shot Prompt: The model already knows the task

One-shot Prompt: The model needs to learn your task.

Few-shot Prompt: The model needs to learn your custom pattern

PROMPT ENGINEERING

Zero-Shot, One-Shot & Few-Shot Prompting

How many examples does your LLM need?

0 examples Zero-Shot

Works when the task is obvious and the model already knows how.

PROMPT

Translate to Spanish: "Thank you"

→ Output: "Gracias"

1 example One-Shot

Needed when your output format is custom and non-obvious.

PROMPT

Extract in this format:

"John, 28, Engineer"

→ name:John | age:28 | role:Engineer

"Sara, 32, Designer"

→ Output: name:Sara | age:32 | role:Designer

2+ examples Few-Shot

Required when the pattern is custom and can't be guessed.

PROMPT

Classify the bug priority:

"Payments failing" → P0

"Wrong font on About page" → P2

"App crashes on launch" → P0

"Dark mode text hard to read" → P2

"Search returns no results"

→ Output: P0
